

One case, connected work

Entity A requests FX forward. Entity B is the reported Singapore parent; Person T works for B. Coordination, identity, signing and trading authority remain separate.

Approved synthetic design. Bank rules and authority require validation. No final MVP ranking or production integration is claimed.

From evidence to product behaviour

Method → Personas → Current / Target Journey → Scenario → Product Experience → Human boundaries → Product Definition → Open questions. The existing journey retains role groups and trigger variants; this consolidation adds no business scenario.

Current and Target describe work design. MVP retains explicit human review; target autonomy remains a hypothesis. Baseline and changed sessions keep their own revisions and archives.

Region is presentation context only; it does not change policy assumptions.

Current saved case

DEMO-CTT-001 · Case revision 1 · Scope revision 1

Clearance projection unavailable for the current context or role. This is not a factual Not ready result.

Living Story

Reading never loads outcomes. Open a scene to reach its Product task and exact return context. Reviewed D / E continuation explicitly archives the prior session.

Define the relationship

STORY-1 · SCN-SCOPE · M0.1–M0.4 · M1.1

Trigger	New relationship; current scope and required inputs
Current work	RM and Ops clarify the requested relationship, proposed legal entity, product and booking context. Current already performs this work.
Target work	Product organises Group A, Entity A and requested FX forward as separate, sourced fields. Human records the working scope and visible unknowns.
Decision	Explicit demo permission to record working scope; actual bank authority remains a validation question.
State change / next scene	A versioned working scope feeds entity review and a requirements draft. It is not a product, KYC or clearance approval. · STORY-2

Establish entity and authority

STORY-2 · SCN-ENTITY · M1.3–M1.5 · M3.4

Trigger	New relationship; current scope and required inputs
Current work	Ops checks legal entity details and supplied evidence. Specific representative authority is assessed separately; authority detail is an industry-informed extension.
Target work	Separate Entity A, reported parent B and Person T. Assess EV-A03 only for coordinating information for A; open a purpose-specific gap.
Decision	A configured employee records an evidence-use assessment, not a blanket approval of Person T. Unknown task owner is Unassigned.
State change / next scene	Entity context becomes clearer, authority work awaits evidence, and only eligible preparation continues. Overall Not ready. · STORY-3

Make requirements explicit

STORY-3 · SCN-REQUIREMENTS · M2.1–M2.5

Trigger	New relationship; current scope and required inputs
Current work	Determine AML and non-AML requirements, exceptions and risk indicators for the relationship.
Target work	Prepare a versioned requirement set. Show the subject, purpose and basis of each requirement; retain unknown applicability.
Decision	Confirm the demo requirement set. No client policy is inferred.
State change / next scene	Requirements confirmed for this synthetic scope; evidence still needs assessment. · STORY-4

Use evidence already available

STORY-4 · SCN-SOURCE · M3.1–M3.2

Trigger	New relationship; current scope and required inputs
Current work	Search public and commercial sources, then identify residual gaps. This already exists in the Current map.
Target work	Link a source item to a specific subject, requirement and purpose, with its original version intact.
Decision	Review proposed reuse. One accepted file does not satisfy every requirement.
State change / next scene	Entity identity may be supported; screening disambiguation remains a separate use. · STORY-5

Ask only for remaining gaps

STORY-5 · SCN-GAP · M2.5 · M3.2–M3.3

Trigger	New relationship; current scope and required inputs
Current work	Issue requirements and request outstanding information from the client.
Target work	Consolidate only unresolved facts into a purpose-specific request, with an owner and response link.
Decision	Review the missing fact, purpose and response owner before simulating release.
State change / next scene	Request recorded locally. No email is sent. Receipt returns evidence to review. · STORY-6

Assess evidence for its purpose

STORY-6 · SCN-VALIDATE · M3.4–M3.5

Trigger	New relationship; current scope and required inputs
Current work	Capture and validate evidence; maintain outstanding gaps and the sourcing trail.
Target work	Keep the artifact and its use assessment separate. A received supplement needs its own reviewed assessment.
Decision	A configured demo reviewer records sufficiency with rationale; bank authority remains open.
State change / next scene	Evidence use assessed. Screening still requires a separate human disposition. · STORY-7

Screen the right subjects

STORY-7 · SCN-POPULATION · M4.1–M4.4

Trigger	New relationship; current scope and required inputs
Current work	Teams assemble parties and categories from available case material, while unconfirmed ownership and related-party membership remain open.
Target work	A versioned population shows Entity A, Entity B and Person T separately. A permitted preliminary run can proceed for Person T without claiming comprehensive coverage.
Decision	A human reviews inclusion basis and current inputs. No hidden category or comprehensive run is configured.
State change / next scene	Population remains incomplete; the permitted subject and any missing members are explicit. · STORY-8

Resolve a possible match

STORY-8 · SCN-MATCH · M4.5–M4.7

Trigger	New relationship; current scope and required inputs
Current work	Adjudicate possible hits, assess materiality and record the screening outcome.
Target work	Prepare subject-to-record comparisons and evidence-use links. A human records the disposition or requests more information.
Decision	Only a configured reviewer may record the permitted unresolved outcome. Exclusion is disabled; there is no autonomous approval or automatic EDD.
State change / next scene	A bounded decision records unresolved or referral against current inputs. Identity, population, EDD and other case conditions remain separately visible. · STORY-9

Assess elevated risk, if applicable

STORY-9 · SCN-EDD · M5

Trigger	New relationship; current scope and required inputs
Current work	EDD applicability is assessed separately from sanctions finding review; missing reasons remain unknown.
Target work	Show required, not required or unknown with its exact reviewed basis. If required, open only a bounded targeted pack and keep approval unknown.
Decision	A human records applicability and any specialist assessment. No EDD approval or clearance writer is configured.
State change / next scene	Applicability remains unknown and readiness remains Not ready; screening and EDD do not overwrite one another. · D1

Parallel work, one shared case

D1 · SCN-CONFLICTS · M1 → M7

Trigger	New relationship; current scope and required inputs
Current work	Current: handoffs are interpreted across separate records and version currency is easy to miss.
Target work	Conflicts, Credit and Legal advance on their own prerequisites.
Decision	Only configured Conflicts roles see restricted detail. No misconduct finding, clearance decision or whole-case approval is inferred.
State change / next scene	A scoped contribution to a still Not Ready case. · D2

Conflicts starts early and stays bounded

D2 · SCN-CONFLICTS · M1 → M7

Trigger	New relationship; current scope and required inputs
Current work	Current: handoffs are interpreted across separate records and version currency is easy to miss.
Target work	Search is complete; a specialist reviews the open finding.
Decision	Only configured Conflicts roles see restricted detail. No misconduct finding, clearance decision or whole-case approval is inferred.
State change / next scene	A scoped contribution to a still Not Ready case. · D3

Credit produces a versioned condition

D3 · SCN-CREDIT · C2.1–C2.3

Trigger	New relationship; current scope and required inputs
Current work	Current: handoffs are interpreted across separate records and version currency is easy to miss.
Target work	Track CC-01 and pass a revision-addressed AI-01 to Legal.
Decision	The facilitator may simulate one guarded revision. It is not a monetary decision, policy change, approval or case clearance.
State change / next scene	A versioned Credit condition and agreement input, not case clearance. · D4

Legal consumes a named Credit input

D4 · SCN-LEGAL · C1.1–C1.3

Trigger	New relationship; current scope and required inputs
Current work	Current: handoffs are interpreted across separate records and version currency is easy to miss.
Target work	Keep AGR-01 revision 03 frozen while checking whether its Credit input remains current.
Decision	Internal approval is not execution or signing authority. The prototype exposes no Legal approval, execution or clearance writer.
State change / next scene	An internally approved agreement remains pending execution. · D5

Readiness keeps every unresolved condition visible

D5 · SCN-READINESS · M8.1

Trigger	New relationship; current scope and required inputs
Current work	Current: handoffs are interpreted across separate records and version currency is easy to miss.
Target work	Inspect every unresolved condition and the authority boundary.
Decision	Final bank authority is not configured. Publishing and real trades are outside this slice.
State change / next scene	A scoped contribution to a still Not Ready case. · E1

QA reviews the assembled case

E1 · SCN-QA · M6

Trigger	New relationship; current scope and required inputs
Current work	Task completion and evidence receipt can hide an unassessed purpose.
Target work	Inspect current scope, requirements, evidence uses, screening / EDD and specialist outputs.
Decision	Explicit configured human review; bank authority remains to validate
State change / next scene	Identify the exact ownership evidence use that needs QA review. · E2

Issue a precise QA gap

E2 · SCN-QA · M6

Trigger	New relationship; current scope and required inputs
Current work	A broad return to KYC obscures the affected requirement and owner.
Target work	QA records the ownership-purpose gap and assigns its specific remediation.
Decision	Explicit configured human review; bank authority remains to validate
State change / next scene	Open the specific remediation; retain unrelated Legal and Credit work. · E3

Remediate and re-review

E3 · SCN-QA · M6

Trigger	New relationship; current scope and required inputs
Current work	A completed remediation can be mistaken for a passed QA check.
Target work	KYC Operations submits and completes a purpose assessment; QA independently re-reviews it.
Decision	Explicit configured human review; bank authority remains to validate
State change / next scene	Return the current evidence-use assessment to QA for re-review and separate sign-off. · E4

Close remaining conditions

E4 · SCN-READINESS · M8.1

Trigger	New relationship; current scope and required inputs
Current work	Separate completion reports do not show dependencies or unknown applicability.
Target work	Review named Conflicts, full coverage, EDD, scope context, KYC and Legal closure events.
Decision	Explicit configured human review; bank authority remains to validate
State change / next scene	Confirm each current prerequisite; Legal uses current Credit and separate Signatory S authority. · E5

Ready for authorised confirmation

E5 · SCN-READINESS · M8.1

Trigger	New relationship; current scope and required inputs
Current work	A ready checklist can be mistaken for an authorised clearance.
Target work	Evaluate current applicable prerequisites and inspect the scoped readiness snapshot.
Decision	Explicit configured human review; bank authority remains to validate
State change / next scene	The configured Authorised Clearance Reviewer reviews the complete basis and explicitly confirms. · E6

Record the decision and publish

E6 · SCN-PUBLISH · M8.2–M8.5

Trigger	New relationship; current scope and required inputs
Current work	Recorded clearance, delivered outcome and executed trade can be conflated.
Target work	Record scoped clearance and timestamp, then separately simulate permitted outcome delivery.
Decision	Explicit configured human review; bank authority remains to validate
State change / next scene	Inspect delivery status and retry a failure without discarding the clearance decision. · End of story

Shared objects and state distinctions

▼ Case & Scope

Case	case
CaseScope	scopes

▼ Party & Authority

LegalEntity	entities
Person	naturalPersons
Representative	representatives
AuthorityRecord	authorities

▼ Requirement

RequirementSet	requirements (scope + revision grouping)
Requirement	requirements
Gap	requestItems / qaFindings (distinct purpose and quality gaps)

▼ Evidence

EvidenceArtifact	evidence
EvidenceClaim	evidence[].claims (embedded)
EvidenceUseAssessment	evidenceUseAssessments

▼ Work

WorkItem	workItems
InformationRequest	informationRequests
Remediation	workItems (QA remediation subtype)
Hold	holds

▼ Decision & Specialist

Decision	decisions / screeningReviewDecisions (typed)
ScreeningFinding	screeningFindings
ConflictReview	conflictReviews
CreditCondition	creditConditions
LegalAgreement	legalAgreements

▼ Dependency

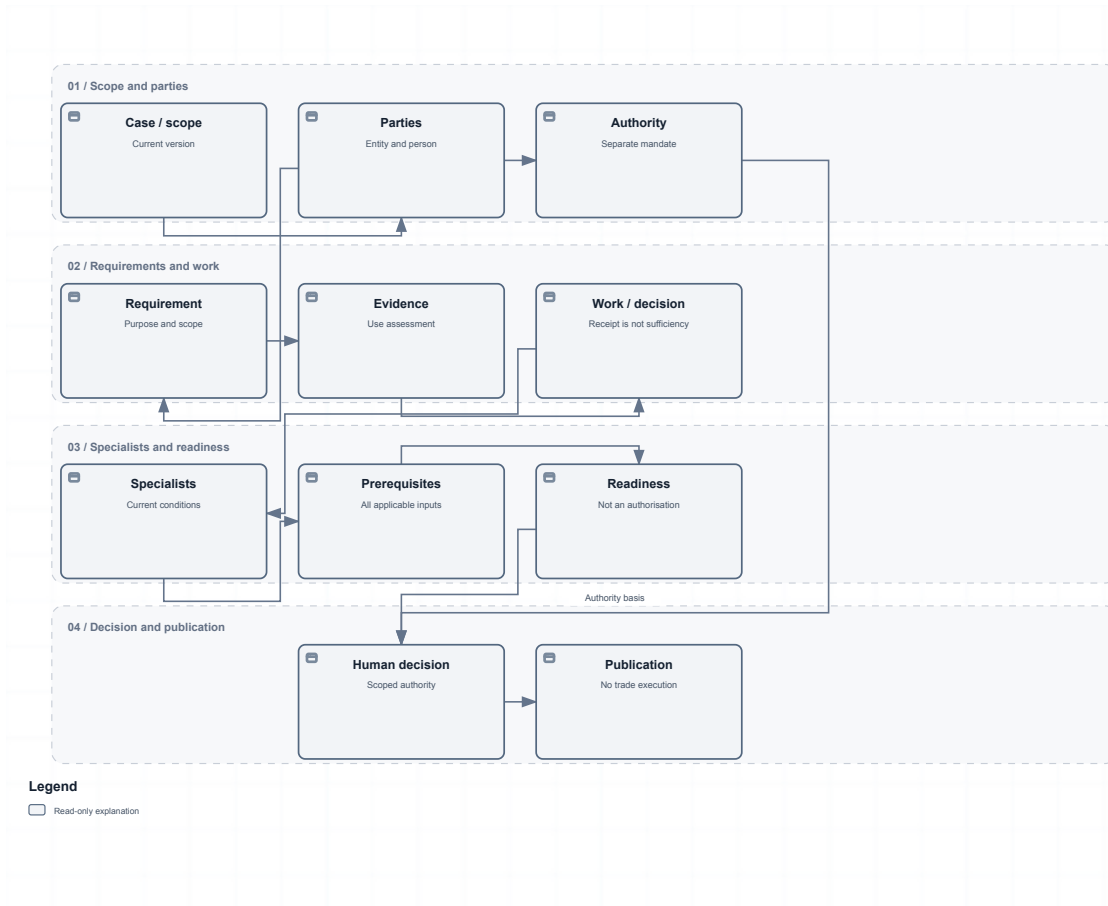

DependencyEdge	dependencies
ProfessionalCondition	clearanceConditions

▼ Clearance

ClearancePrerequisite	clearancePrerequisites (evaluated snapshots)
ReadinessSnapshot	readinessSnapshots
ClearanceDecision	clearanceDecisions
PublicationEvent	publicationEvents

Unknown ≠ Not applicable. Completed ≠ Satisfied. Satisfied ≠ Authorised. Authorised ≠ Published. Published ≠ Trade executed.

Shared case spine

1. Case / scope: Current version
2. Parties: Entity and person
3. Authority: Separate mandate
4. Requirement: Purpose and scope
5. Evidence: Use assessment
6. Work / decision: Receipt is not sufficiency
7. Specialists: Current conditions
8. Prerequisites: All applicable inputs
9. Readiness: Not an authorisation
10. Human decision: Scoped authority
11. Publication: No trade execution

Explanation controls change reading position only. No audio or video received.

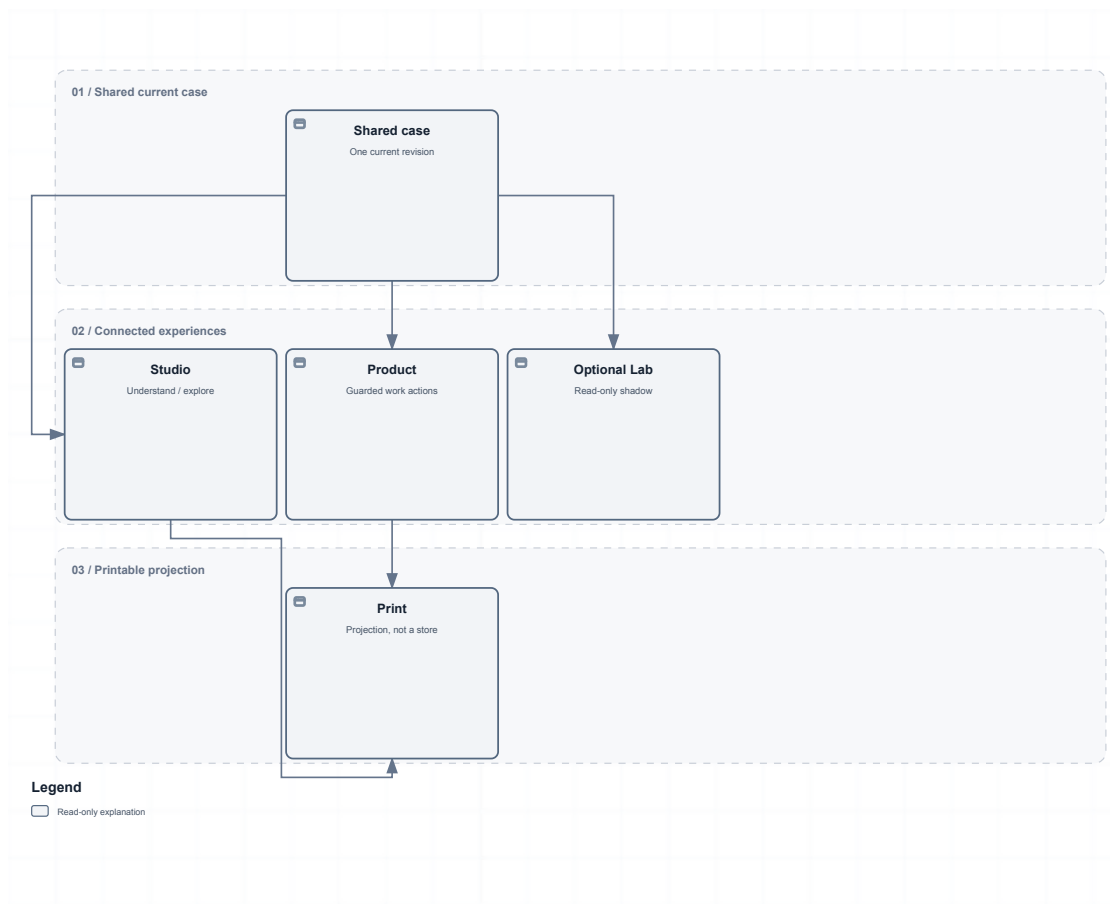

Dependency and hold impact

Static semantic fallback. Graph validation did not pass or is unavailable; the complete logic remains below.

- | | |
|--|---|
| 1. Change / issue: Versioned input | 7. Unknown: Review required |
| 2. Find dependency: Current edge and basis | 8. Affected work: Recorded dependency |
| 3. Determine scope: Do not infer | 9. Permitted work: Positive current basis |
| 4. Task: Named work item | 10. Unknown links: Not independence |
| 5. Branch: Named branch | 11. Resolve / reassess: Reviewed current inputs |
| 6. Case: Applicable case scope | 12. Re-evaluate: Where relevant |

Explanation controls change reading position only. No audio or video received.

One case, connected experiences

1. Shared case: One current revision
2. Studio: Understand / explore
3. Product: Guarded work actions
4. Optional Lab: Read-only shadow
5. Print: Projection, not a store

Explanation controls change reading position only. No audio or video received.

Dependency impact

Projection only. The original qualified IDs and endpoint revisions are retained. No edge is not proof of independence. Historical mapping can be unknown in this conservative impact view without overriding the engine readiness decision.

Current internal dependency projection unavailable for this context or role.

Capability and requirement hypotheses

▼ Case & Scope Management

The product shall retain the legal entity, product and scope revision and display unknown booking context explicitly.

Human boundary: Human confirms scope; coordination does not confer signing or trading authority

Observable acceptance: AC-F01: Given Entity A requests FX forward and Person T works for reported parent B; When working scope is recorded; Then Entity A remains the counterparty and coordination does not grant signing or trading authority.

CAP-001 · CTT-REQ-001 · SCN-SCOPE|SCN-ENTITY · M0.1|M1.1|M1.3 · SRC-013|SRC-021 · ASM-001

▼ Dynamic Requirements

The product shall version requirements for the current scope and retain unknown applicability until an explicit reviewed decision.

Human boundary: Human confirms the requirement set; unknown applicability is unresolved

Observable acceptance: AC-F02: Given applicability is unknown; When the requirement set is presented; Then unknown remains explicit and cannot satisfy readiness or become not_required.

CAP-002 · CTT-REQ-002 · SCN-REQUIREMENTS · M2.1|M2.5 · SRC-010|SRC-021 · ASM-003|ASM-004

▼ Evidence & Provenance

The product shall separate artifact receipt from purpose-specific sufficiency and retain prior claims, assessments and versions.

Human boundary: Reviewer records purpose-specific sufficiency with reason; receipt is not acceptance

Observable acceptance: AC-F03: Given an artifact is received and its purpose assessment is insufficient; When the case is reevaluated; Then the linked requirement stays unsatisfied and file presence alone cannot make the case ready.

CAP-003 · CTT-REQ-003 · SCN-SOURCE|SCN-VALIDATE · M3.1|M3.4|M3.5 · SRC-015|SRC-021 · ASM-004|ASM-005

▼ Client Collaboration

The product shall show a contributor only explicitly granted request items and preserve partial submission and independent review status.

Human boundary: Request review, dispatch, authentication, grant and business authority are separate

Observable acceptance: AC-F04: Given two request items have separate contributor grants; When one contributor submits one item; Then only its receipt changes and the other item and overall clearance stay unresolved.

CAP-004 · CTT-REQ-004 · SCN-GAP|SCN-VALIDATE · M2.5|M3.3|M3.4 · SRC-015|SRC-021 · ASM-004

▼ Screening & Exception Review

The product shall bind runs and findings to a scoped population and preserve unknown coverage and EDD applicability independently.

Human boundary: Specialist makes disposition; EDD applicability has its own reviewed basis

Observable acceptance: AC-F05: Given population scope is empty, stale or unconfirmed; When screening or readiness is evaluated; Then coverage is not complete and the case cannot become ready.

CAP-005 · CTT-REQ-005 · SCN-POPULATION|SCN-MATCH|SCN-EDD · M4.1|M4.4|M5 · SRC-016|SRC-021 · ASM-003|ASM-004

▼ Specialist Work Orchestration

The product shall show the current Credit condition and the exact revision consumed by Legal while allowing only independently permitted preparation.

Human boundary: Specialists own decisions; preparation, approval and execution stay separate

Observable acceptance: AC-F06: Given a Credit input changes after Legal consumed it; When Legal is reviewed; Then its consumed version is visibly stale and execution/readiness remains blocked until reviewed.

CAP-006 · CTT-REQ-006 · SCN-CONFLICTS|SCN-CREDIT|SCN-LEGAL · M7|C2|C1 · SRC-019|SRC-021 · ASM-001|ASM-005

▼ Human Decision & Authority

The product shall require current scoped readiness, configured authority and an explicit human confirmation before recording clearance.

Human boundary: Only configured synthetic authority can confirm; actual bank authority remains unknown

Observable acceptance: AC-F07: Given readiness is ready for authorised confirmation and no decision is recorded; When QA, RM or an unknown role attempts confirmation; Then the action is rejected and no clearance decision is created.

CAP-007 · CTT-REQ-007 · SCN-ENTITY|SCN-READINESS · M1.3|M8.3 · SRC-020|SRC-021 · ASM-004

▼ Dependency & Hold Management

The product shall identify exact affected requirements, evidence uses and downstream dependencies without declaring unmodelled work independent.

Human boundary: Hold owner and release basis must be explicit; absence of an edge is not independence

Observable acceptance: AC-F08: Given a branch hold with explicit current dependencies; When impact is projected; Then affected work is identified, unrelated work requires an explicit permitted basis, and unknown dependencies remain unknown.

CAP-008 · CTT-REQ-008 · SCN-CONFLICTS|SCN-LEGAL|SCN-QA · M7|C1|M6.6 · SRC-019|SRC-020|SRC-021 · ASM-005

▼ Readiness & Clearance

The product shall evaluate all current applicable prerequisites and retain a clearance decision when a separate publication attempt fails.

Human boundary: QA signs off separately; authorised reviewer confirms; publication is a separate simulated action

Observable acceptance: AC-F09: Given all applicable prerequisites are satisfied without an authorised decision; When readiness is evaluated; Then it is READY_FOR_AUTHORISED_CONFIRMATION, not CLEARED_TO_TRADE; after an authorised decision a publication failure retains that decision and executes no trade.

CAP-009 · CTT-REQ-009 · SCN-QA|SCN-READINESS|SCN-PUBLISH · M6|M8 · SRC-020|SRC-021 · ASM-004|ASM-005

▼ Audit & Traceability

The product shall preserve the current saved revision and semantic location across Story, Product, Return, language, print and optional Lab views.

Human boundary: Source support is not bank approval; optional Lab reads only and no injection is enabled

Observable acceptance: AC-F10: Given saved work at a scene and viewport; When Product returns after language change or Story/graph/Lab/print is used; Then the latest language and saved revision remain and no view control records a business decision.

CAP-010 · CTT-REQ-010 · SCN-SCOPE|SCN-GAP|SCN-QA|SCN-READINESS|SCN-PUBLISH · M0|M3|M6|M8 · SRC-021|SRC-020|SRC-021 · ASM-005

Friday validation questions

Where does Case Manager coordination end and KYC Operations evidence judgment begin?

Current assumption: Case Manager coordinates; KYC Ops assesses evidence; not confirmed

Confirming role: Client operations owner

Q-007 · SCN-SCOPE|SCN-REQUIREMENTS|SCN-QA · CTT-REQ-001|CTT-REQ-002 · Open; no client answer inferred

Who may authorise final clearance for which entity, product and booking scope?

Current assumption: Only the configured synthetic reviewer can confirm; bank authority null

Confirming role: Delegated authority and compliance owner

Q-005 · SCN-READINESS · CTT-REQ-007|CTT-REQ-009 · Open; no client answer inferred

Which parties and categories are required in the screening population and who confirms completeness?

Current assumption: Authored scoped inventory; unknown coverage blocks

Confirming role: Financial Crime and policy owner

C-Q-POPULATION · SCN-POPULATION|SCN-MATCH · CTT-REQ-005 · Open; no client answer inferred

Who determines EDD applicability, makes the judgment and approves its outcome?

Current assumption: Independent applicability review; no universal trigger from a possible match

Confirming role: Financial Crime / EDD authority owner

C-Q-EDD-APPLICABILITY · SCN-EDD · CTT-REQ-005 · Open; no client answer inferred

What minimum inputs permit Legal and Credit to start preparation before other branches close?

Current assumption: Preparation uses its own permitted inputs; current Credit required before Legal execution

Confirming role: Legal and Credit process owners

Q-008 · SCN-CREDIT|SCN-LEGAL · CTT-REQ-006 · Open; no client answer inferred

Which client submission and secure task channels, authentication and disclosure policies are approved?

Current assumption: Local synthetic request with separate mock authentication and scoped grants

Confirming role: Client channels / security / operations owner

C-Q-COLLABORATION · SCN-GAP|SCN-VALIDATE · CTT-REQ-004 · Open; no client answer inferred

Which Screening, Conflicts and Risk details may the RM see?

Current assumption: RM gets allowlisted progress; restricted rationale excluded

Confirming role: Compliance and relationship management owner

Q-009 · SCN-MATCH|SCN-CONFLICTS · CTT-REQ-004|CTT-REQ-005 · Open; no client answer inferred

Who chooses task, branch or case hold scope and approves release?

Current assumption: Unknown scope blocks dependent actions; absence of an edge is not independence

Confirming role: Operations and relevant specialist owner

C-Q-HOLD · SCN-CONFLICTS|SCN-LEGAL|SCN-QA · CTT-REQ-008 · Open; no client answer inferred

Which downstream systems receive structured Clear-to-Trade state and what is their acknowledgement contract?

Current assumption: Named synthetic outcome register only; no production integration

Confirming role: Trading / risk system owner

Q-010 · SCN-PUBLISH · CTT-REQ-009 · Open; no client answer inferred

Who owns publication failures, retry, reconciliation and notification?

Current assumption: Case Manager can simulate retry; failure preserves current clearance decision

Confirming role: Operations and downstream support owner

Q-011 · SCN-PUBLISH · CTT-REQ-009 · Open; no client answer inferred

Which relationship or product changes permit evidence reuse and which require new assessment?

Current assumption: Purpose and version reviewed independently; history retained

Confirming role: Policy / evidence / operations owner

Q-003 · SCN-SOURCE|SCN-VALIDATE|SCN-READINESS · CTT-REQ-003|CTT-REQ-010 · Open; no client answer inferred

Is this synthetic Hero Case representative enough for Workshop validation, and which limitations must be stated?

Current assumption: One synthetic Entity A FX-forward case only; no volume or KPI claims

Confirming role: Workshop sponsor and process authors

Q-012 · SCN-SCOPE|SCN-PUBLISH · CTT-REQ-001|CTT-REQ-010 · Open; no client answer inferred

▼ Living Case Lab · optional read-only lenses

Evidence and remaining limits

49 registered observations retain inherited verification. Separately dated retrieval/title checks returned 39 of 40 registered official URLs; one PDF retrieval was inconclusive. The provider may use cached crawls; this is not observation, policy, origin-uptime or media re-verification. FHIR R4 / R5 stay distinct.

DG-F01/F03 static exports passed, while their standalone viewers failed vertical containment and are not primary previews. DG-F02 did not pass the bounded Archify graphical gate; complete semantic fallback is provided. E English DG-E03 also uses semantic fallback. Full schema meta-validation is NOT_RUN. D5 UX-010 permission configuration variants remain a separate residual. The full Workshop-ready acceptance is not claimed.
